Data Center Infrastructure :

We offer Services Networking, Server, Storage and Software 's related to setting up the data center environment that required high end knowledge and expertise. We work with customer from beginning, starting from requirement study, consultation, technology mapping and integration, benchmarking, built, deploy and manage.

We will work with proven technology partners and our capabilities in integrating those technologies is our key in making sure of the success of any data center infrastructure project.

We believe that right technologies are important but the equally important is working with partner which have the right skill in making sure all are well installed and integrated and in working condition.

IT Consultation and Training :

Customer also can approach to us to engage our consultant or engineer for tech-refresh or high-end services like zoning for storage, reconfigure of high-end servers.

We also provide Unix based training (Linux/Solaris) in house or it can be arranged at customer place.

Support and Maintenance Services:

Support and maintenance is crucial in any organization where their business very much depends on IT. Proper support and maintenance is a must to make sure their hardware's are running at maximum uptime. Survey shows, that accepted uptime rate must be at least 99.6% a year.

Only scheduled downtime is allowed and only happen in a proper timing which do not affect the whole business operations. We have in-house skilled engineer, escalation process systems and ever ready replacement parts that we can get anytime from authorised warehouse.

Customer also can purchase direct from us on the IT parts, either brand new, second hand or refurbished based on their budget but installation must have done by customer.

Security Solutions:

It is crucial part now in any organization when all the critical data and applications are put on internet. Even more important when all the businesses are depending from Information Technology to generate business revenue.

Down time will create bad image and damage to the organization; therefore action need to be taken to secure threats from both outside/inside which can slow down the process and bring down the server.

We can help our customer from beginning to check or penetrate the security, test in all aspects (SPA) or event go into details on each hardware. Once done, we will be able to advise the customer on the next step on how to overcome the security issues

Google for Business Services:

Google technology is the best platform for any new company to set-up their back-end IT communications. It covers end-to-end solutions, user friendly with affordable cost. We will be able to offer you the service as below:

- Register and configure DNS
- Set-up company email
- Set -up company homepage
- Personalise your google requirements
- End user training
